MPA1 Audio Monitoring Range Installation and Operation Manual Version 1.6

Version History

Issue	Date	Change Details
0.1	01/02/18	Preliminary guide
1.0	05/10/18	Initial release
1.1	25/1/19	Added MPA1 SOLO 8 and MPA1 MIX 8
1.2	1/10/19	Added Analogue, AES and GPIO Pinout Information
1.3	22/2/21	Added MPA1-SOLO-IP
1.4	16/11/21	Safety information added
1.5	15/11/22	Added -1 variants
1.6	16/12/22	Added MPA1-MIX-NET

Introduction

The MPA1 range of audio monitors provide high-quality confidence monitoring in a compact 1RU design. At just 100 mm deep and less than 4 kg, MPA1 audio monitors are ideally suited for environments where space and weight are a premium, such as OB trucks and flyaways.

Designed for ease of use, all MPA1 Audio Monitors can be controlled directly from the front panel, or remotely over an Ethernet network using a suitable web-browser or control system using SNMP.

This manual covers the following Audio Monitoring Products within the MPA1 Range:

MPA1-SOLO-IP	MPA1-MIX-NET-V-1		
MPA1-SOLO-SDI	MPA1-MIX-SDI	MPA1-SOLO-SDI-1	MPA1-MIX-SDI-V-1
MPA1-SOLO-MADI	MPA1-MIX-MADI	MPA1-SOLO-MADI-1	MPA1-MIX-MADI-V-1
MPA1-SOLO-DANTE	MPA1-MIX-DANTE	MPA1-SOLO-DANTE-1	MPA1-MIX-DANTE-V-1
MPA1-SOLO-8	MPA1-MIX-8		

The MPA1-SOLO variants provide instantaneous selection and monitoring of any incoming audio source, whilst the MPA1-MIX variants also allow for multiple monitor mixes, comprising up to 8 audio pairs, to be created, stored and recalled with ease.

Front Panel Layouts

Front Panel for MPA1-SOLO variants

"V" Front Panel Layout for MPA1-MIX variants

Legacy Front Panel Layouts for MPA1-MIX *(non-V variants)*

Safety Information

The symbol shown on the rear panel of the unit indicates that it is only suitable for use at altitudes not exceeding 2000m.

Installation

Unless otherwise stated TSL MPA1 units may be installed at any angle or position within an operating temperature of 5°C - 40°C.
The TSL MPA1 range conforms to the following legislation:

EMC Directive 2014/30/EU
Low Voltage Directive (LVD) 2014/35/EU

MPA1-SOLO-IP Installation

Product	Inputs	Outputs	Other
MPA1-SOLO-IP	2 x SFP Ports 2 x 3G/HD/SD-SDI 1 x AES3 (75 ohm) 2 x Analogue Inputs (Balanced)	1 x 3G/HD/SD-SDI (reclocked) 2 x Analogue Outputs (Balanced) 1 x Headphone Output 1 x HDMI Monitoring Output	1 x 1Gig/E Ethernet Port (Management and Control) 1 x USB Port (Software Updates and Configuration) 1 x IEC Power Inlet

The MPA1 is equipped with 2x SFP Ports which can be used as follows:

Function	Notes
Reception of 3G/HD/SD-SDI signals using MultiMode Optical Fiber	Requires optional multi-mode (850nm) 3G/HD/SD-SDI SFP receiver modules
Reception of 3G/HD/SD-SDI signals using SingleMode Optical Fiber	Requires optional single-mode (1310nm) 3G/HD/SD-SDI SFP receiver modules
Subscription to SMPTE 2022-6 flows	Requires optional multi-mode (850nm) ST2022-6 IP SFP Modules*
Subscription to SMPTE 2110 flows	Requires optional multi-mode (850nm) ST2110 IP SFP Modules*

* Please note that when using the MPA1-SOLO-IP to monitor ST2022-6 or ST2110 IP flows, optional SMPTE 2022-6 and SMPTE 2110 IP modules must be purchased from TSL.

To configure the optional ST2022-6 and ST2110 modules for use with your IP network, TSL recommends the use of MN SET from Embrionix.

Identifying the Factory IP Address of an Embrionix SFP

The optional Embrionix SFP modules come with an IP address predefined by the manufacturer, which is unique for each device. The IP address of an SFP can be calculated based on its MAC address.

To calculate the predefined IP address:

1. Note the MAC address of the SFP module.

2. Using a **hexadecimal to decimal calculator**, convert the last three octets into their decimal value. Please note that the first three octets are the same for all Embrionix SFPs.
3. The resulting three octets provide the configured IP address of the module. The first octet is always 10.

e.g.: A device with the MAC address of *40:A3:6B:**A0:3E:50*** has the following IP address:

10.160.62.80

The IP address can be changed using MN SET once accessed.

MPA1-MIX-NET-V-1 Installation

MPA1-MIX-NET-V-1

| Product	Inputs	Outputs	Other
MPA1-MIX-NET-V-1	1 x 1Gig/E Ethernet Port (AoIP / ST 2110-30 / AES67 / Ravenna) 1 x MADI (SFP cage for optional SFP module)	2 x Analogue Outputs (Balanced) 1 x Headphone Output	1 x 1Gig/E Ethernet Port (Management and Control) 1 x USB Port (Software Updates and Configuration) 1 x IEC Power Inlet

The MPA1-MIX-NET is equipped with a Merging ZMAN card which provides Audio-over-IP connectivity. It supports IP audio input streams which are ST 2110-30, AES67 or Ravenna formats.

The MPA1-MIX-NET connects to the AoIP network via the dedicated AoIP network port located on the rear of the unit. This interface provides both media traffic and in-band AoIP control through the in-built ZMAN web interface, Merging REST API or NMOS IS-04/05. The MPA1 control and configuration webpage is accessed through the separate Control network port, further information can be found in the Initial Setup chapter of this manual.

Identifying the IP address of the ZMAN card

The ZMAN cards are shipped with DHCP enabled so will obtain an IP address automatically if a DHCP server is present on the network. If no DHCP server is present, the device will use *zeroconf* to auto assign a link-local IP address. Once the AoIP network port is connected to the media network, the device can be accessed from a web browser by typing in the IP address of the ZMAN card into the address bar.

ANEMAN, a freely available application from Merging, can be used to discover and note the IP addresses of any MPA1-MIX-NET devices connected to the local network. ANEMAN can also be used to route audio streams to the MPA1-MIX-NET from compatible devices.

Units 1&2, First Avenue, Globe Park, Marlow, Buckinghamshire, SL7 1YA, UK
Tel: +44 (0)1628 564610   E: enquiries@tslproducts.com
www.tslproducts.com

Page **22** of **117**

Registered No: 05143472 VAT Registered No: GB254 0619 19

ZMAN Advanced Configuration Webpage

The Advanced Configuration webpage of the ZMAN card can be used to configure all ZMAN parameters, including the **input streams**, **PTP** and **NMOS** settings as well as saving and restoring **configuration files**.

The webpage can be accessed by typing in the IP address followed by the following string to the address bar of a web browser:

http://*<IP_ADDRESS_OF_ZMAN_CARD>*/advanced/index.html

For full documentation covering the Advanced Configuration webpage please refer to Merging's ZMAN documentation. This can also be accessed by clicking on the help icon next to the unit selection drop-down in the top left-hand corner of the webpage:

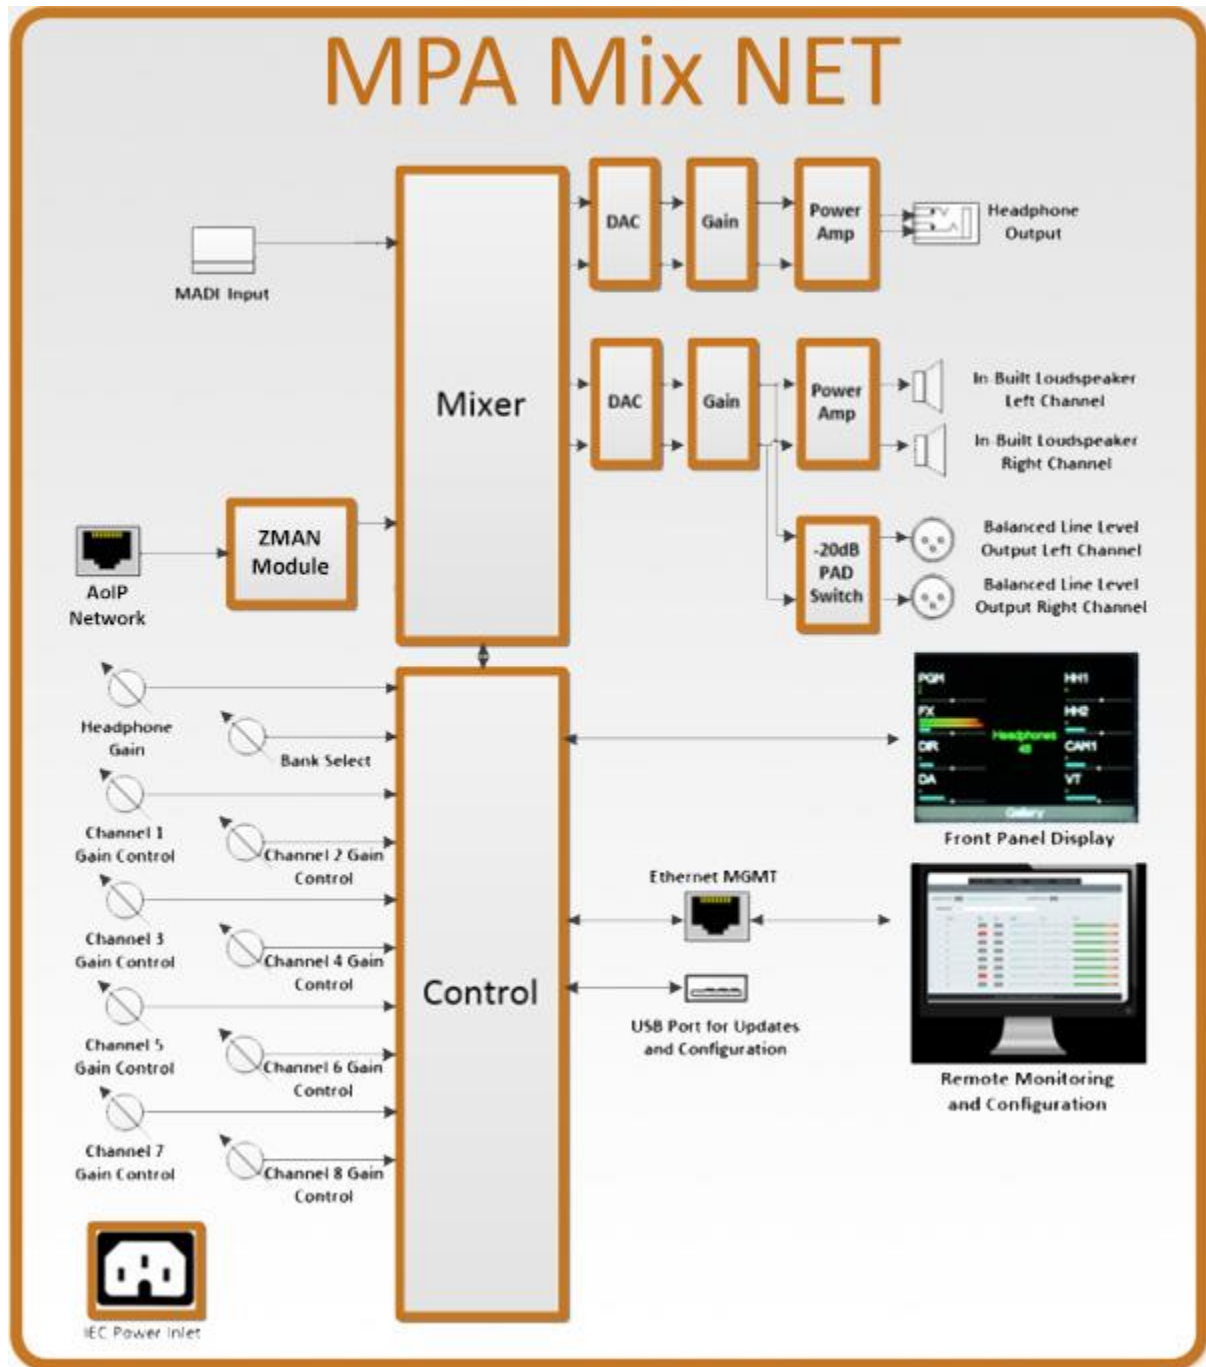

Mapping input channels of the ZMAN card

The MPA1-MIX-NET features 64 channels of inputs for Audio-over-IP sources.
These channels are labelled "AoIP *x*" on the MPA1-MIX-NET front panel display and web interface.

The numbers on both the ZMAN card and the MPA1-MIX-NET are correlated to each other, i.e., connecting a channel from an incoming stream to *TSL MPA1-MIX-NET-V-1 I/O Channel 1* as shown in the ZMAN routing matrix will route the signal to the *AoIP 01* input of the MPA1-MIX-NET.

However, as with other MPA1-MIX products, it is possible to re-route each input channel to different mix banks as required. For further information please see the Routing section of this manual.

Please note that the number of AoIP input channels across all streams is limited to 64, which means that you can add incoming streams in the *Session Sinks* tab of the ZMAN Ravenna Advanced Configuration webpage until the total channel count of all incoming streams reaches 64. All incoming channels must be assigned to an output within the 64-channel bus.

MPA1-MIX-8 Functional Schematic
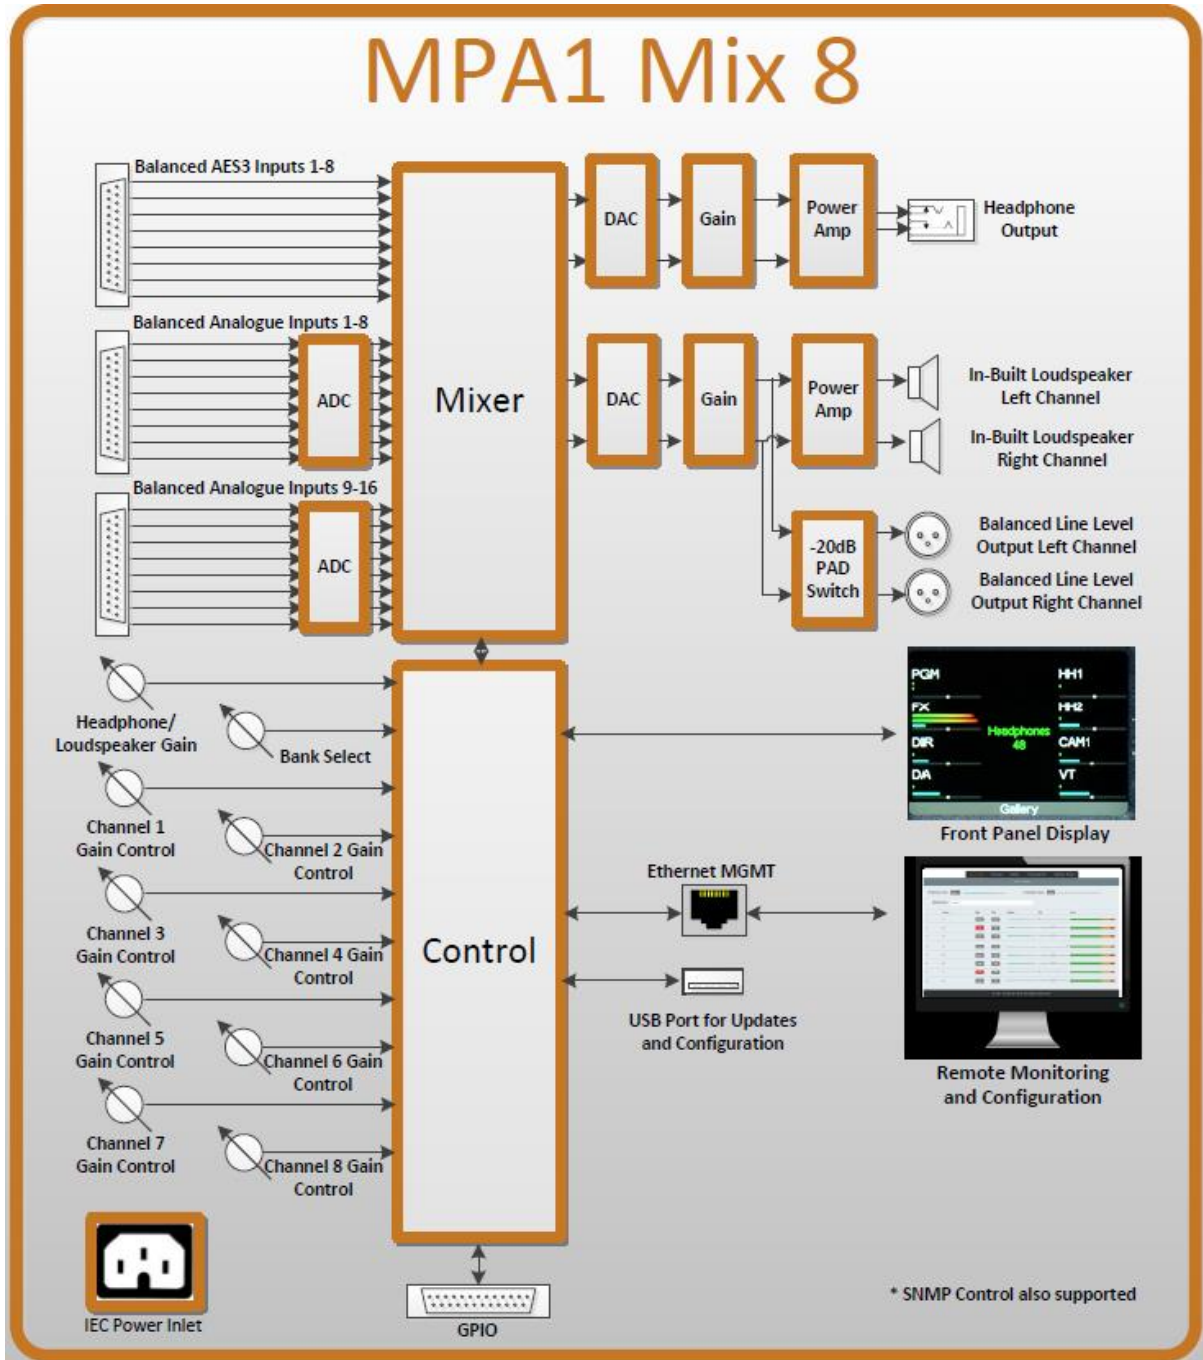

Initial Setup

In order to realise the full benefits of your MPA1 Audio Monitor, TSL Products recommends connecting your MPA1 Audio Monitor to an Ethernet network during initial set-up and configuration.

Full configuration of your MPA1 Audio Monitor can be achieved by way of a suitable client PC and web-browser.

If you are installing multiple MPA1 units, you can copy the configuration of one unit to another using a USB flash drive. For more information about this, please refer to the *"Load and Save configuration to USB flash drive"* chapter on the next page of this manual.

Setting the Control IP Address of your MPA1 Audio Monitor

All MPA1 Audio Monitors are shipped with a DHCP setting default to 'DHCP 'On'.

To determine the current IP address of your MPA1, push and hold the SELECT/MENU encoder for 3 seconds to access the **Settings** Menu.

The **Settings** Menu will now appear on the front panel display of your MPA1, with the current IP Address shown.

Using the SELECT/MENU encoder, you can scroll through the Settings Menu to highlight a Settings Sub-Menu of your choice.
The availability of Sub-Menus is depicted by the presence of the following symbol: **>>**

Settings
Firmware Version : 1.X.X

IP Address >> : 192.168.204.3
USB Load/Save >>
Source : Coax
With the IP Address Sub-Menu highlighted as shown, briefly push the SELECT/MENU encoder to access the **Network Settings** Menu (see below).

Units 1&2, First Avenue, Globe Park, Marlow, Buckinghamshire, SL7 1YA, UK

Registered No: 05143472 VAT Registered No: GB254 0619 19

The SELECT/MENU encoder will now allow you to scroll through, select and modify the Network Settings of your MPA1 in accordance with the guidelines set by your Network Administrator.

Once complete, select BACK to return to the **Settings** Menu. You can exit the **Settings** Menu by pushing and holding the SELECT/MENU encoder for 3 seconds once more.

```

Accessing the Webpage of your MPA1

Configuring your MPA1 Audio Monitor using a Client PC and Web-Browser

With your MPA1 connected to an Ethernet network, you can remotely control and configure your MPA1 using a Client PC and Web-Browser.

The MPA1 Webpage allows you to optimise your MPA1 for your environment and the workflow you need to support.

Settings such as the brightness of the front panel display, which sources may be selected from the front panel of the unit and the behaviour of the MPA1 when used with Headphones can all be set using the MPA1 Webpage.

Enter the IP Address of your MPA1 into a Web-Browser
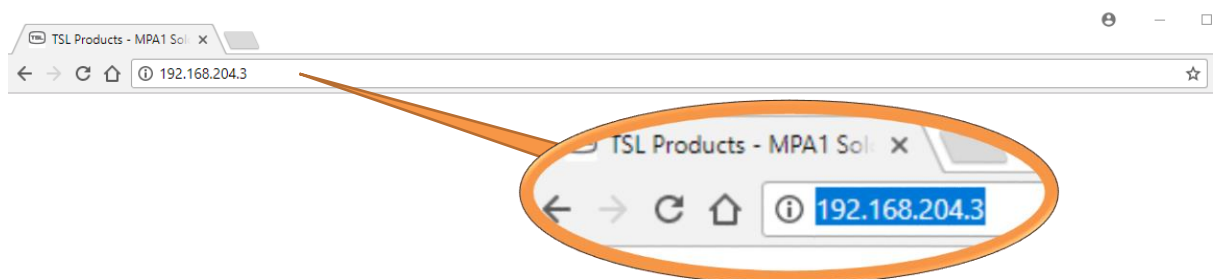

The MPA1 Webpage comprises multiple Tabs, providing quick navigation to specific sections of the MPA1 configuration, providing quick and easy setup.

Units 1&2, First Avenue, Globe Park, Marlow, Buckinghamshire, SL7 1YA, UK
Tel: +44 (0)1628 564610   E: enquiries@tslproducts.com
www.tslproducts.com

Page **30** of **117**

Registered No: 05143472 VAT Registered No: GB254 0619 19

Separate Tabs for LIVE VIEW, NAMES, CONFIGURATION and NETWORK SETUP are present on the Webpage belonging to all MPA1-SOLO variants, whilst an extra ROUTING Tab can be found on all MPA1-MIX variants.

MPA1-SOLO- SDI, MPA1-SOLO-SDI-1, MPA1-SOLO-MADI, MPA1-SOLO-MADI-1, MPA1-SOLO-DANTE, MPA1-SOLO-DANTE-1 and MPA1-SOLO-8

MPA1-MIX-SDI, MPA1-MIX-SDI-V-1, MPA1-MIX-MADI, MPA1-MIX-MADI-V-1, MPA1-MIX-DANTE, MPA1-MIX-DANTE-V-1, MPA1-MIX-NET-V-1 and MPA1-MIX-8

MADI Input Source Selection

On the *MPA1-SOLO-MADI, MPA1-SOLO-DANTE, MPA1-MIX-MADI* and *MPA1-MIX-DANTE* the MADI input can be supplied through on-board BNC connectivity or via the SFP module – using a copper or optical connection. The active input can be configured via the webpage.

On the *MPA1-SOLO-MADI-1, MPA1-SOLO-DANTE-1, MPA1-MIX-MADI-1 and MPA1-MIX-DANTE-1* the MADI input is supplied via the SFP module – using a copper or optical connection. On these units the source selection parameter in the Configuration tab needs to be set to "*optical*" even if the SFP used is receiving signal over a copper connection.

Load and Save Configuration to USB Flash Drive

All units within the MPA1 range are equipped with a USB slot on the front panel. This enables saving and loading the unit configuration to and from a USB flash drive. This feature is particularly useful when backing up the current configuration or copying it from one unit to another.

It is recommended to use a USB drive formatted with a FAT32 file system.

To save or load the configuration, follow these steps:

1. Insert the USB drive into the USB port located on the front panel of the unit.
2. Long press the "**Select / Menu**" button.
3. Using the same encoder, scroll down and select "**USB Load/Save**".
4. Select "*Load Config*" or "*Save Config*" accordingly.
5. Once the operation is completed, a message of "*USB backup/load completed*" appears on the display.

The backup file will be stored as a *.CONF* file in the root of the USB drive.

MPA1-SOLO-IP Webpage

Clicking on the LIVE VIEW Tab of the MPA1-SOLO-IP Webpage displays the following:

Element	Function	Notes
1	Switch to Mute Headphone Output	Red when Muted, Grey when Active
2	Headphone Output Level adjustment	Adjust as required
3	Switch to Mute the Loudspeaker Output	Red when Muted, Grey when Active
4	Loudspeaker Output Level adjustment	Adjust as required
5	Input Selection	Switches between SDI 1, SDI 2, SFP1, SFP2 and AES + Analogue Input Monitoring
6	Audio Level Meter Display	Displays Audio Levels in accordance with Input Selection
7	Stereo/Mono Switch	Switches Audio Monitoring Selectors between Single Audio Channel and Audio Pair mode.
8	Screen Mode Switch	Switches front panel display between Audio Metering and SDI Video Source.
9	Signal Format Display	Format display of SDI 1, SDI 2 and AES3 Inputs
10	Audio Monitor Selectors	Selects the Single Audio Channel or Audio Pair routed to the Headphone and Loudspeaker Outputs.

Clicking on the **NAMES** Tab of the MPA1-SOLO-IP Webpage displays the following:

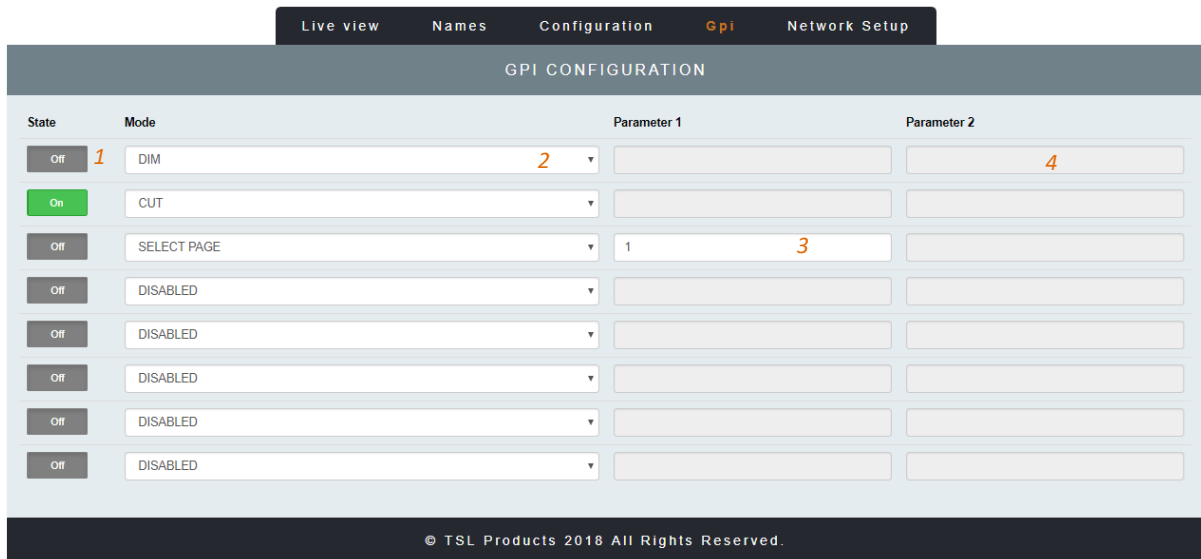

Element	Function	Notes
1	Input Active Buttons	Allows unused inputs to be hidden from the Operator
2	Input Names	Allows friendly names to be applied to SDI 1, SDI 2, SFP1, SFP2 and AES/Analog Input Groups
3	Channel Names	Allows friendly names to be applied to all 16 Embedded Audio Channels belonging to SDI 1, SDI 2, SFP1 and SFP2 Inputs and AES and Analogue Channels.

Units 1&2, First Avenue, Globe Park, Marlow, Buckinghamshire, SL7 1YA, UK

Page **33** of **117**

Clicking on the **CONFIGURATION** Tab of the MPA1-SOLO-SDI Webpage displays the following:
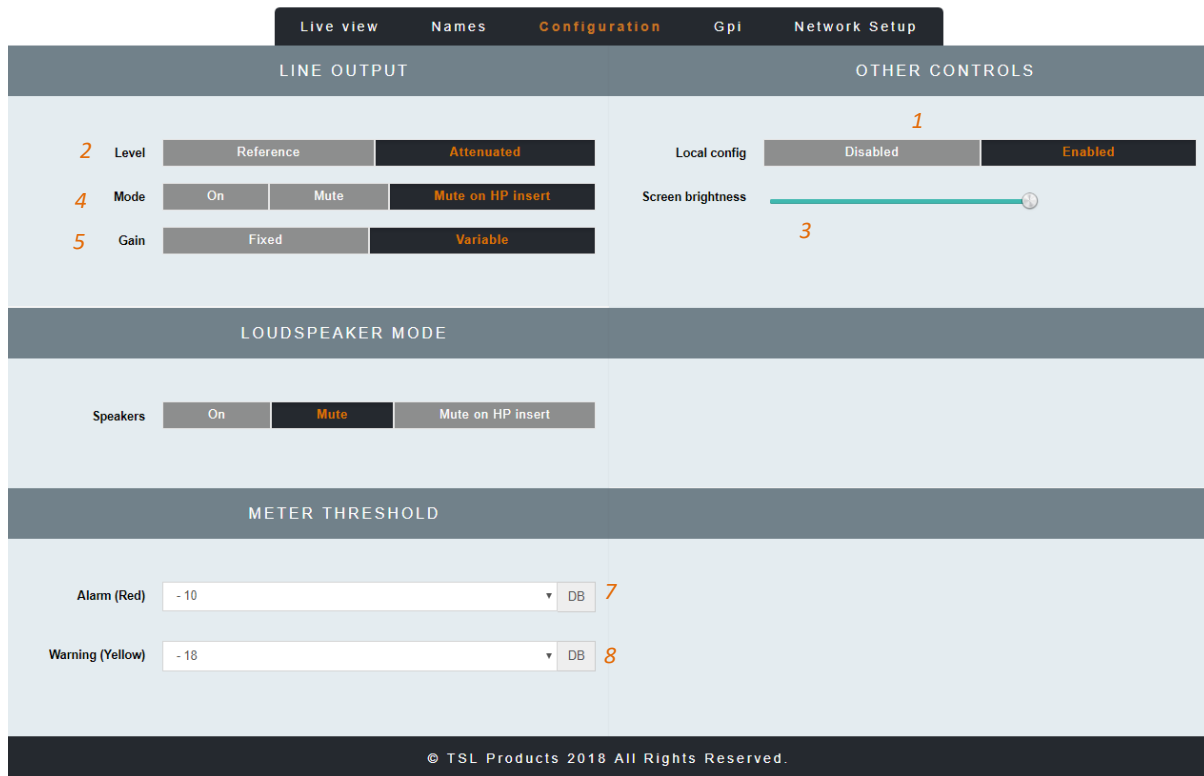

Element	Function	Notes
1	Local Config	Enables/Disables configuration from the front panel of the MPA1-SOLO-IP
2	Line Output Level	Sets the Output Level of the Balanced Line Level Outputs on the MPA1-SOLO-IP
3	Screen Brightness	Sets the Brightness Level of the front panel display
4	Line Output Mode	Determines behaviour of Balanced Line Level Outputs upon insertion of Headphones.
5	Fixed or Variable Line Output	Determines if Balanced Line Level Outputs provide a Fixed or Variable Output
6	Loudspeaker Mode	Determines behaviour of Internal Loudspeakers upon insertion of Headphones.
7	Meter Threshold RED	Sets audio threshold at which audio level meters begin to display RED
8	Meter Threshold YELLOW	Sets audio threshold at which audio level meters begin to display YELLOW

Clicking on the **GPI** Tab of the MPA1-SOLO-SDI Webpage displays the following:

Element	Function	Notes
1	Virtual GPI State button	Displays current Virtual GPI status. Also allows manual activation of Virtual GPI.
2	Virtual GPI Mode Selector	Allows GPI 'Action' to be assigned to Virtual GPI Input
3	Virtual GPI Parameter 1	Defines first Parameter associated with selected GPI 'Action'
4	Virtual GPI Parameter 2	Defines second Parameter associated with selected GPI 'Action'

Please note that Virtual GPI Actions such as DIM and CUT require no further Parameters to be defined, whilst Virtual GPI Actions such as SELECT PAGE or SELECT PAGE and RETURN require entry of the desired audio channel.

All MPA1 Virtual GPI Parameters are zero based, with audio channels 1-16 represented as Parameters 0-15.

Clicking on the **NETWORK SETTINGS** Tab of the MPA1-SOLO-SDI Webpage displays the following:

Element	Function	Notes
1	DHCP	Enables/Disables DHCP Mode
2	IP Address	Displays current IP Address and allows new IP Address to be entered.
3	Subnet Mask	Displays current Subnet Mask and allows new Subnet Mask to be entered.
4	Gateway Address	Displays current Gateway Address and allows new Gateway Address to be entered.
5	Apply IP Address	Button to apply IP, Subnet and Gateway addresses to the MPA1-SOLO-IP

MPA1-SOLO-SDI / MPA1-SOLO-SDI-1 Web Page

Clicking on the **LIVE VIEW** Tab of the MPA1-SOLO-SDI webpage displays the following:

| Element	Function	Notes
1	Switch to Mute Headphone Output	Red when Muted, Grey when Active
2	Headphone Output Level adjustment	Adjust as required
3	Switch to Mute the Loudspeaker Output	Red when Muted, Grey when Active
4	Loudspeaker Output Level adjustment	Adjust as required
5	Input Selection	Switches between SDI 1, SDI 2* and AES + Analogue Input Monitoring
6	Audio Level Meter Display	Displays Audio Levels in accordance with Input Selection
7	Stereo/Mono Switch	Switches Audio Monitoring Selectors between Single Audio Channel and Audio Pair mode.
8	Screen Mode Switch	Switches front panel display between Audio Metering and SDI Video Source.
9	Signal Format Display	Format display of SDI 1, SDI 2* and AES3 Inputs
10	Audio Monitor Selectors	Selects the Single Audio Channel or Audio Pair routed to the Headphone and Loudspeaker Outputs.

NOTE: Features marked with an asterisk (*) are not applicable to the MPA1-SOLO-SDI-1 and if selected will not function.

MPA1-MIX-SDI / MPA1-MIX-SDI-V-1 Web Page

Clicking on the **LIVE VIEW** Tab of the MPA1-MIX-SDI Webpage displays the following:

Element	Function	Notes
1	Switch to Mute Headphone Output	Red when Muted, Grey when Active
2	Headphone Output Level adjustment	Adjust as required
3	Switch to Mute the Loudspeaker Output	Red when Muted, Grey when Active
4	Loudspeaker Output Level adjustment	Adjust as required
5	Mix Bank Selection	Drop down list allowing recall of one of 16 Audio Mix Banks (A-P)
6	Display	Switches Front Panel Display of MPA1-MIX-SDI between Audio Meters and SDI Video Source
7	Source Name	Displays Source and Friendly Name[1]
8	Channel Mute	Mutes Selected Channel
9	Channel Solo	Places Selected Channel in Solo Mode (Click and Hold)
10	Channel Volume	Adjusts channel Volume within overall Mix
11	Channel Pan	Adjusts channel Pan within overall Mix
12	Audio Level Meters	Audio Level Display

[1] Friendly Names can be set in the NAMES Tab

NOTE: Features marked with an asterisk (*) are not applicable to the MPA1-MIX-SDI-V-1 and if selected will not function.

Clicking on the **ROUTING** Tab of the MPA1-MIX-SDI Webpage displays the following:

Element	Function	Notes
1	Mix Bank Identifier	Identifies one of the 16 Mix Banks (A-P)
2	Channel Number	Channel number of source contributing to Mix Bank (1-8)
3	Audio Channel Gain Preset	Allows +20dB, +10db, 0dB, -10dB or -20dB to be applied to Audio Channel Input
4	Stereo/Mono Switch	Switches Input Channel between Audio Channel and Audio Pair Mode
5	Audio Channel Selector	Selects Audio Channels contributing to chosen Mix Bank. Audio Channels Embedded in SDI 1, SDI 2* and AES and Analogue Inputs can be selected.

Clicking on the **NAMES** Tab of the MPA1-MIX-SDI Webpage displays the following:

Live view	Routing	Names	Configuration	Gpi	Network Setup

GROUP NAMES

Group	Active	Video	Name
1	Yes	SDI 1	A
2	Yes	SDI 2	B
3	Yes	SDI 1	C
4	Yes	SDI 2	D
5	Yes	SDI 1	E

...

| 15 | No | SDI 1 | O |
| 16 | No | SDI 2 | P |

...

CHANNELS NAMES

Input	Auto All	Name
SDI 1 1 *5*	No *6*	SDI 1 : 1 *7*
SDI 1 2	No	SDI 1 : 2
SDI 1 3	No	SDI 1 : 3
SDI 1 4	No	SDI 1 : 4

...

Analog/AES 1	No	Analog + AES
Analog/AES 2	No	Analog + AES
Analog/AES 3	No	Analog + AES
Analog/AES 4	No	Analog + AES

Element	Function	Notes
1	Mix Bank Identifier	Identifies one of the 16 Mix Banks (A-P)
2	Active Switch	Determines which MIX Banks are available for selection on the front panel of the MPA1-MIX-SDI.
3	Video Switch	Determines which SDI Video Source is displayed on the front panel, reclocked SDI Output and HDMI Output for each MIX Bank [1]
4	Mix Bank Name	Friendly Name of MIX Bank [2]
5	Physical Input Identifier	Physical Input and Channel Number
6	Auto Naming Function	Not Supported
7	Friendly Name	Allows friendly names to be applied to SDI Embedded Audio, AES and Analogue Audio Channels

[1] **:** This does **not** apply to MPA1-MIX-SDI-V-1.

[2] : Friendly Names can be set in the **NAMES tab.**

Clicking on the **CONFIGURATION** Tab of the MPA1-MIX-SDI Webpage displays the following:

Element	Function	Notes
1	Channel Knob Push	Enables/Disables 'Push to Mute' function of Channel Rotary Encoders on front panel of MPA1-MIX-SDI
2	Channel Knob Push and Rotate	Determines 'Push and Rotate' behaviour of Channel Rotary Encoders on the front panel of the MPA1-MIX-SDI. When set to Balance, the Audio Balance of the selected Audio Channel can be adjusted. When set to Mapping, the Physical Audio Channel assigned to the Mix Channel can be selected.
3	Channel Knob Push and Hold	Enables/Disables 'Push and Hold to Solo' function of Channel Rotary Encoders on front panel of MPA1-MIX-SDI
4	Group Select Knob Push	Enables/Disables Push to MUTE function of Headphone, Internal Loudspeakers and Balanced Line Outputs using Group Select Knob
5	Group Select Knob Rotate	Determines whether Group Select Knob is Enabled/Disabled. Selecting Group allows Mix Groups to be selected from the front panel of the MPA-MIX-SDI, whilst selecting Volume allows level adjustment on the Internal Loudspeakers and Balanced Line Level Outputs.
6	Gain Bar Display	Enables/Disables the Gain Bar Display from the front panel of the MPA1-MIX-SDI

Units 1&2, First Avenue, Globe Park, Marlow, Buckinghamshire, SL7 1YA, UK

Page **61** of **117**

7	Local Config	Enables/Disables configuration from the front panel of the MPA1-MIX-SDI
8	Line Output Level	Sets the Output Level of the Balanced Line Level Outputs on the MPA1-MIX-SDI
9	Line Output Mode	Determines behaviour of Balanced Line Level Outputs upon insertion of Headphones.
10	Fixed or Variable Line Output	Determines if Balanced Line Level Outputs provide a Fixed or Variable Output
11	Screen Brightness	Sets the Brightness Level of the front panel display
13	Loudspeaker Mode	Determines the behaviour of Internal Loudspeakers upon insertion of Headphones

TSL Products

Clicking on the **GPI** Tab of the MPA1-MIX-SDI Webpage displays the following:

Element	Function	Notes
1	Virtual GPI State button	Displays current GPI status. Also allows manual activation of Virtual GPI.
2	Virtual GPI Mode Selector	Allows GPI 'Action' to be assigned to GPI Input
3	Virtual GPI Parameter 1	Defines first Parameter associated with selected GPI 'Action'
4	Virtual GPI Parameter 2	Defines second Parameter associated with selected GPI 'Action'

Please note that Virtual GPI Actions such as DIM and CUT require no further Parameters to be defined, whilst Virtual GPI Actions such as SELECT PAGE or SELECT PAGE and RETURN require entry of the desired audio channel.

All MPA1 Virtual GPI Parameters are zero based, with audio channels 1-16 represented as Parameters 0-15.
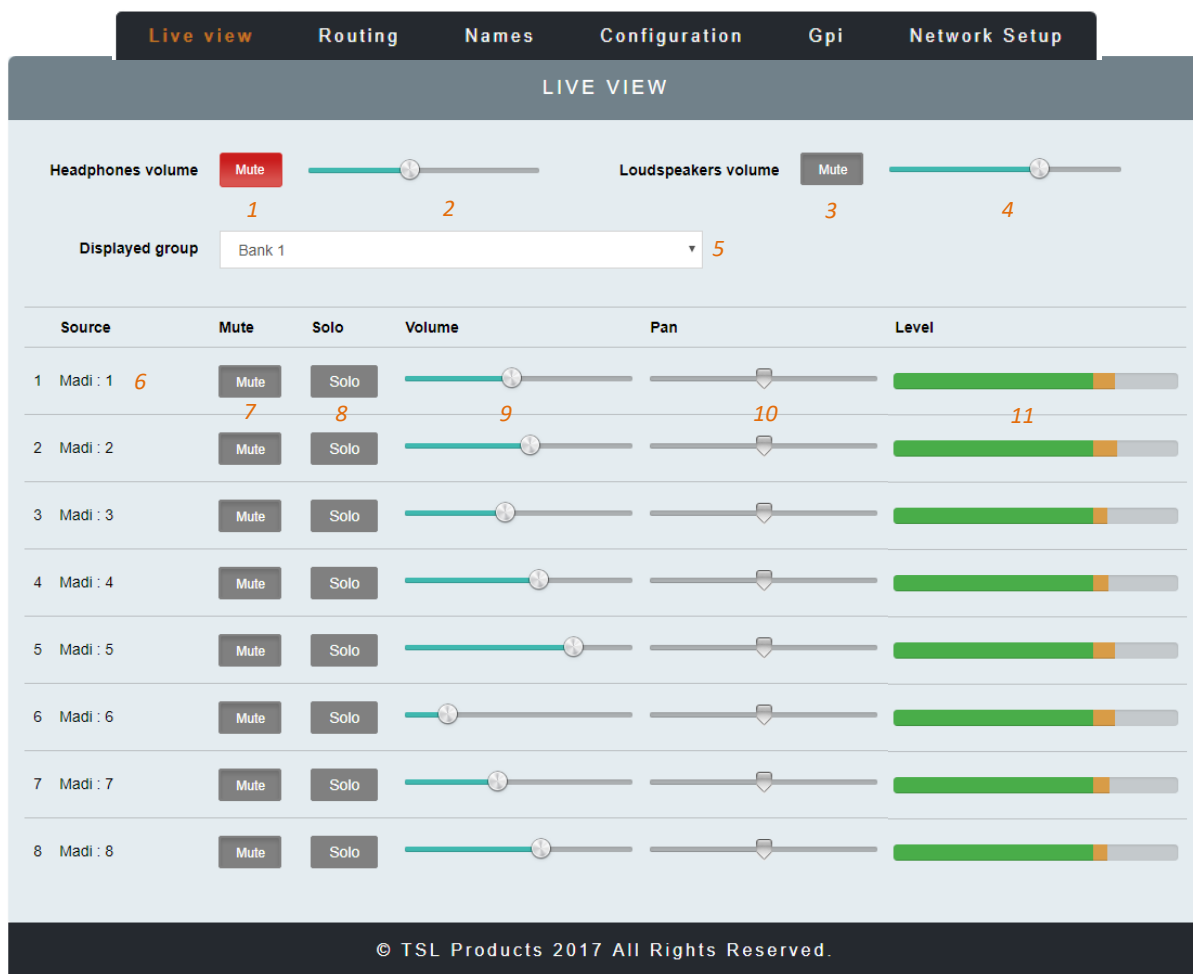

Clicking on the **NETWORK SETTINGS** Tab of the MPA1-MIX-SDI Webpage displays the following:

Element	Function	Notes
1	DHCP	Enables/Disables DHCP Mode
2	IP Address	Displays current IP Address and allows new IP Address to be entered.
3	Subnet Mask	Displays current Subnet Mask and allows new Subnet Mask to be entered.
4	Gateway Address	Displays current Gateway Address and allows new Gateway Address to be entered.
5	Apply IP Address	Button to apply IP, Subnet and Gateway addresses to the MPA1-MIX-SDI

MPA1-MIX-MADI / MPA1-MIX-MADI-V-1 Web Page

Clicking on the LIVE VIEW Tab of the MPA1-MIX-MADI Webpage displays the following:

Element	Function	Notes
1	Switch to Mute Headphone Output	Red when Muted, Grey when Active
2	Headphone Output Level adjustment	Adjust as required
3	Switch to Mute the Loudspeaker Output	Red when Muted, Grey when Active
4	Loudspeaker Output Level adjustment	Adjust as required
5	Mix Bank Selection	Drop down list allowing recall of one of 16 Audio Mix Banks (A-P)
6	Source Name	Displays Source and Friendly Name*
7	Channel Mute	Mutes Selected Channel
8	Channel Solo	Places Selected Channel in Solo Mode (Click and Hold)
9	Channel Volume	Adjusts channel Volume within overall Mix
10	Channel Pan	Adjusts channel Pan within overall Mix
11	Audio Level Meters	Audio Level Display

* Friendly Names can be set in the NAMES Tab

Clicking on the **ROUTING** Tab of the MPA1-MIX-MADI Webpage displays the following:

Element	Function	Notes
1	Mix Bank Identifier	Identifies one of the 16 Mix Banks (A-P)
2	Channel Number	Channel number of source contributing to Mix Bank (1-8)
3	Audio Channel Gain Preset	Allows +20dB, +10db, 0dB, -10dB or -20dB to be applied to Audio Channel Input
4	Stereo/Mono Switch	Switches Input Channel between Audio Channel and Audio Pair Mode
5	Audio Channel Selector	Selects Audio Channels contributing to chosen Mix Bank. MADI Channels 1-64 can be selected.

Clicking on the **NAMES** Tab of the MPA1-MIX-MADI Webpage displays the following:

Live view	Routing	**Names**	Configuration	Gpi	Network Setup

1	Mix Bank Identifier	Identifies one of the 16 Mix Banks (A-P)
2	Active Switch	Determines which MIX Banks are available for selection on the front panel of the MPA1-MIX-MADI.
3	Mix Bank Name	Friendly Name of MIX Bank*
4	Physical Input Identifier	Physical Input and Channel Number
5	Auto Naming Function	Not Supported
6	Friendly Name	Allows friendly names to be applied to MADI Channels (1-64) and Analogue Audio Channels

Clicking on the **CONFIGURATION** Tab of the MPA1-MIX-MADI Webpage displays the following:

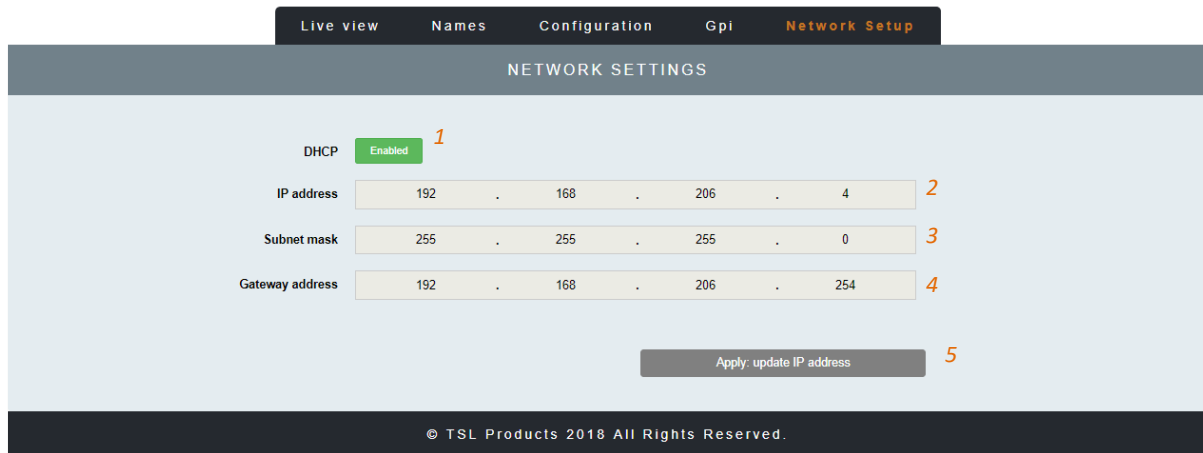

Element	Function	Notes
1	Channel Knob Push	Enables/Disables 'Push to Mute' function of Channel Rotary Encoders on front panel of MPA1-MIX-MADI
2	Channel Knob Push and Rotate	Determines 'Push and Rotate' behaviour of Channel Rotary Encoders on the front panel of the MPA1-MIX-MADI. When set to Balance, the Audio Balance of the selected Audio Channel can be adjusted. When set to Mapping, the Physical Audio Channel assigned to the Mix Channel can be selected.
3	Channel Knob Push and Hold	Enables/Disables 'Push and Hold to Solo' function of Channel Rotary Encoders on front panel of MPA1-MIX-MADI
4	Group Select Knob Push	Enables/Disables Push to MUTE function of Headphone, Internal Loudspeakers and Balanced Line Outputs using Group Select Knob
5	Group Select Knob Rotate	Determines whether Group Select Knob is Enabled/Disabled. Selecting Group allows Mix Groups to be selected from the front panel of the MPA-MIX-MADI, whilst selecting Volume allows level adjustment on the Internal Loudspeakers and Balanced Line Level Outputs.
6	Gain Bar Display	Enables/Disables the Gain Bar Display from the front panel of the MPA1-MIX-MADI

7	Local Config	Enables/Disables configuration from the front panel of the MPA1-MIX-MADI
8	Line Output Level	Sets the Output Level of the Balanced Line Level Outputs on the MPA1-MIX-SDI
9	Line Output Mode	Determines behaviour of Balanced Line Level Outputs upon insertion of Headphones.
10	Fixed or Variable Line Output	Determines if Balanced Line Level Outputs provide a Fixed or Variable Output
11	Screen Brightness	Sets the Brightness Level of the front panel display
12	MADI Source	Determines if MADI Sources are derived from Coaxial BNC or Optical SFP Input. *
13	Loudspeaker Mode	Determines the behaviour of Internal Loudspeakers upon insertion of Headphones

NOTE: *This setting is only applicable to the MPA1-MIX-MADI. On the MPA1-MIX-MADI-V-1 this parameter needs to be set to "*optical*" even if the SFP used is receiving signal over a copper connection.

Operation

The MPA1 Range has been designed to provide quick and easy selection of any desired audio source in an intuitive manner that requires little in the way of training.

One of the key benefits of the MPA1 is the ability to personalise or tailor its configuration and behaviour to suit a specific workflow, application or environment If the behaviour or configuration of your MPA1 is not as expected or required, please check the configuration and settings made in the webpage belonging to your MPA1.

All these settings can be made via the webpage of your MPA1 (see appropriate chapter earlier in this manual).

The following chapters present an operational overview of each MPA1 variant.

MPA1-SOLO-IP Operation

The front panel of the MPA1-SOLO-IP is equipped with four rotary controllers as follows:

Encoder	Function	Notes
1	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE currently selected audio source.
2	Output Volume	Rotate to adjust the Audio Level of the Internal Loudspeakers and/or Balanced Analogue Audio Outputs. PUSH to MUTE/UNMUTE Internal Loudspeakers and/or Balanced Analogue Audio Outputs. NOTE: The exact behaviour of this control can be modified using the MPA1-SOLO-IP Webpage, see Settings 2, 4 and 5 of this manual for further information.
3	Select/Menu	Rotate to Scroll through SDI Embedded Audio Channels and/or AES and Analogue Audio Channels. PUSH to switch between Stereo and Mono Audio Monitoring. NOTE: Audio Sources available for selection are determined by the settings found in section 1 of the MPA1-SOLO-IP Webpage. The Select Menu Encoder is also used to access the Settings Menu of the MPA-SOLO-IP. Further information can be found in the Initial Setup chapter of this manual.
4	Balance/Pan and Display Mode	Provides Balance Control of Stereo Audio Sources and Pan Control of Mono Audio Sources. Setting affects Headphone, Internal Loudspeakers and Balanced Analogue Audio Outputs. PUSH to Switch between Multiple Audio Meter, Dual Audio Meter with Phase Metering and Video Display modes.

MPA1-SOLO-SDI / MPA1-SOLO-SDI-1 Operation

The front panel of the MPA1-SOLO-SDI is equipped with four rotary controllers as follows:

Encoder	Function	Notes
1	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE currently selected audio source.
2	Output Volume	Rotate to adjust the Audio Level of the Internal Loudspeakers and/or Balanced Analogue Audio Outputs. PUSH to MUTE/UNMUTE Internal Loudspeakers and/or Balanced Analogue Audio Outputs. NOTE: The exact behaviour of this control can be modified using the MPA1-SOLO-SDI Webpage, see Settings 2, 4 and 5 of this manual for further information.
3	Select/Menu	Rotate to Scroll through SDI Embedded Audio Channels and/or AES and Analogue Audio Channels. PUSH to switch between Stereo and Mono Audio Monitoring. NOTE: Audio Sources available for selection are determined by the settings found in section 1 of the MPA1-SOLO-SDI Webpage. The Select Menu Encoder is also used to access the Settings Menu of the MPA-SOLO-SDI. Further information can be found in the Initial Setup chapter of this manual.
4	Balance/Pan and Display Mode	Provides Balance Control of Stereo Audio Sources and Pan Control of Mono Audio Sources. Setting affects Headphone, Internal Loudspeakers and Balanced Analogue Audio Outputs. PUSH to Switch between Multiple Audio Meter, Dual Audio Meter with Phase Metering and Video Display modes.

MPA1-SOLO-MADI / MPA1-SOLO-MADI-1 Operation

The front panel of the MPA1-SOLO-MADI is equipped with four rotary controllers as follows:

Encoder	Function	Notes
1	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE currently selected audio source.
2	Output Volume	Rotate to adjust the Audio Level of the Internal Loudspeakers and/or Balanced Analogue Audio Outputs. PUSH to MUTE/UNMUTE Internal Loudspeakers and/or Balanced Analogue Audio Outputs. NOTE: The exact behaviour of this control can be modified using the MPA1-SOLO-MADI Webpage, see Settings 2,4 and 5 of this manual for further information.
3	Select/Menu	Rotate to Scroll through MADI Audio Channels and/or Analogue Audio Channels. PUSH to switch between Stereo and Mono Audio Monitoring. The Select Menu Encoder is also used to access the Settings Menu of the MPA-SOLO-MADI. Further information can be found in the Initial Setup chapter of this manual.
4	Balance/Pan and Display Mode	Provides Balance Control of Stereo Audio Sources and Pan Control of Mono Audio Sources. Setting affects Headphone, Internal Loudspeakers and Balanced Analogue Audio Outputs. PUSH to toggle between Multiple Audio Meter and Dual Audio Meter with Phase Metering modes.

MPA1-SOLO-DANTE / MPA1-SOLO-DANTE-1 Operation

The front panel of the MPA1-SOLO-DANTE is equipped with four rotary controllers as follows:

Encoder	Function	Notes
1	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE currently selected audio source.
2	Output Volume	Rotate to adjust the Audio Level of the Internal Loudspeakers and/or Balanced Analogue Audio Outputs. PUSH to MUTE/UNMUTE Internal Loudspeakers and/or Balanced Analogue Audio Outputs. NOTE: The exact behaviour of this control can be modified using the MPA1-SOLO-DANTE Webpage, see Settings 2,4 and 5 of this manual for further information.
3	Select/Menu	Rotate to Scroll through DANTE and/or MADI Audio Channels. PUSH to switch between Stereo and Mono Audio Monitoring. The Select Menu Encoder is also used to access the Settings Menu of the MPA-SOLO-DANTE. Further information can be found in the Initial Setup chapter of this manual.
4	Balance/Pan and Display Mode	Provides Balance Control of Stereo Audio Sources and Pan Control of Mono Audio Sources. Setting affects Headphone, Internal Loudspeakers and Balanced Analogue Audio Outputs. PUSH to toggle between Multiple Audio Meter and Dual Audio Meter with Phase Metering modes.

MPA1-SOLO-8 Operation

The front panel of the MPA1-SOLO-8 is equipped with four rotary controllers as follows:

Encoder	Function	Notes
1	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE currently selected audio source.
2	Output Volume	Rotate to adjust the Audio Level of the Internal Loudspeakers and/or Balanced Analogue Audio Outputs. PUSH to MUTE/UNMUTE Internal Loudspeakers and/or Balanced Analogue Audio Outputs. NOTE: The exact behaviour of this control can be modified using the MPA1-SOLO-8 Webpage, see Settings 2,4 and 5 of this manual for further information.
3	Select/Menu	Rotate to Scroll through AES and Analogue Audio Channels. PUSH to switch between Stereo and Mono Audio Monitoring. The Select Menu Encoder is also used to access the Settings Menu of the MPA-SOLO-8. Further information can be found in the Initial Setup chapter of this manual.
4	Balance/Pan and Display Mode	Provides Balance Control of Stereo Audio Sources and Pan Control of Mono Audio Sources. Setting affects Headphone, Internal Loudspeakers and Balanced Analogue Audio Outputs. PUSH to toggle between Multiple Audio Meter and Dual Audio Meter with Phase Metering modes.

MPA1-MIX-SDI / MPA1-MIX-SDI-V-1 Operation

The front panel of the **MPA1-MIX-SDI-V-1** and **MPA1-MIX-SDI-V** are both equipped with ten rotary controllers as follows:

Encoder	Function	Notes
1-8	Audio Level	Rotate to adjust relative contribution of Sources 1-8 to Stereo Monitoring Mix. NOTE: Sources available are determined by the currently selected Mix Bank (A-P) and the contributing audio channels for each Mix Bank as set in the Routing Tab of the MPA-MIX-SDI. See the Mix Bank section of this manual for further information. PUSH to MUTE/UNMUTE contribution of Sources 1-8 to Stereo Mix. NOTE: PUSH to MUTE/UNMUTE functionality can be disabled by Setting 1 of the MPA-MIX-SDI Webpage. PUSH and ROTATE to adjust Balance of selected source **or** to map alternate audio source to encoder. NOTE: PUSH and ROTATE functionality is determined by Setting 2 on the MPA-MIX-SDI Webpage. PUSH and HOLD to enable SOLO Monitoring of selected source. NOTE: PUSH and HOLD to enable SOLO Monitoring can be disabled using Setting 3 of the MPA-MIX-SDI Webpage.
9	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE entire Stereo Monitoring Mix from the Headphone Output.
10	Select/Menu	Rotate to Scroll through Mix Banks A-P **or** to adjust Level of Stereo Monitoring Mix. NOTE: The behaviour of the Select/Menu encoder is determined by determined by Settings 4 and 5 on the MPA-MIX-SDI Webpage. PUSH to MUTE/UNMUTE Internal Loudspeakers and Balanced Analogue Audio Outputs. The Select Menu Encoder is also used to access the Settings Menu of the MPA-MIX-SDI. Further information can be found in the Initial Setup chapter of this manual.

MPA1-MIX-MADI / MPA1-MIX-MADI-V-1 Operation

The front panel of the **MPA1-MIX-MADI-V** and **MPA1-MIX-MADI-V-1** are both equipped with ten rotary controllers as follows:

Encoder	Function	Notes
1-8	Audio Level	Rotate to adjust relative contribution of Sources 1-8 to Stereo Monitoring Mix. NOTE: Sources available are determined by the currently selected Mix Bank (A-P) and the contributing audio channels for each Mix Bank as set in the Routing Tab of the MPA-MIX-SDI. See the Mix Bank section of this manual for further information. PUSH to MUTE/UNMUTE contribution of Sources 1-8 to Stereo Mix. NOTE: PUSH to MUTE/UNMUTE functionality can be disabled by Setting 1 of the MPA-MIX-SDI Webpage. PUSH and ROTATE to adjust Balance of selected source **or** to map alternate audio source to encoder. NOTE: PUSH and ROTATE functionality is determined by Setting 2 on the MPA-MIX-SDI Webpage. PUSH and HOLD to enable SOLO Monitoring of selected source. NOTE: PUSH and HOLD to enable SOLO Monitoring can be disabled using Setting 3 of the MPA-MIX-MADI Webpage.
9	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE entire Stereo Monitoring Mix from the Headphone Output.
10	Select/Menu	Rotate to Scroll through Mix Banks A-P **or** to adjust Level of Stereo Monitoring Mix. NOTE: The behaviour of the Select/Menu encoder is determined by Settings 4 and 5 on the MPA-MIX-MADI Webpage. PUSH to MUTE/UNMUTE Internal Loudspeakers and Balanced Analogue Audio Outputs. The Select Menu Encoder is also used to access the Settings Menu of the MPA-MIX-MADI. Further information can be found in the Initial Setup chapter of this manual.

MPA1-MIX-DANTE / MPA1-MIX-DANTE-V-1 Operation

The front panel of the **MPA1-MIX-DANTE-V** and **MPA1-MIX-DANTE-V-1** are both equipped with ten rotary controllers as follows:

Encoder	Function	Notes
1-8	Audio Level	Rotate to adjust relative contribution of Sources 1-8 to Stereo Monitoring Mix. NOTE: Sources available are determined by the currently selected Mix Bank (A-P) and the contributing audio channels for each Mix Bank as set in the Routing Tab of the MPA-MIX-DANTE. PUSH to MUTE/UNMUTE contribution of Sources 1-8 to Stereo Mix. NOTE: PUSH to MUTE/UNMUTE functionality can be disabled by Setting 1 of the MPA-MIX-DANTE Webpage. PUSH and ROTATE to adjust Balance of selected source **or** to map alternate audio source to encoder. NOTE: PUSH and ROTATE functionality is determined by Setting 2 on the MPA-MIX-DANTE Webpage. PUSH and HOLD to enable SOLO Monitoring of selected source. NOTE: PUSH and HOLD to enable SOLO Monitoring can be disabled using Setting 3 of the MPA-MIX-DANTE Webpage.
9	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE entire Stereo Monitoring Mix from the Headphone Output.
10	Select/Menu	Rotate to Scroll through Mix Banks A-P **or** to adjust Level of Stereo Monitoring Mix. NOTE: The behaviour of the Select/Menu encoder is determined by Settings 4 and 5 on the MPA-MIX-DANTE Webpage. PUSH to MUTE/UNMUTE Internal Loudspeakers and Balanced Analogue Audio Outputs. The Select Menu Encoder is also used to access the Settings Menu of the MPA-MIX-DANTE. Further information can be found in the Initial Setup chapter of this manual.

MPA1-MIX-NET-V-1 Operation

The front panel of the **MPA1-MIX-NET-V-1** is equipped with ten rotary controllers as follows:

Encoder	Function	Notes
1-8	Audio Level	Rotate to adjust relative contribution of Sources 1-8 to Stereo Monitoring Mix. NOTE: Sources available are determined by the currently selected Mix Bank (A-P) and the contributing audio channels for each Mix Bank as set in the Routing Tab of the MPA-MIX-NET. PUSH to MUTE/UNMUTE contribution of Sources 1-8 to Stereo Mix. NOTE: PUSH to MUTE/UNMUTE functionality can be disabled by Setting 1 of the MPA-MIX-NET Webpage. PUSH and ROTATE to adjust Balance of selected source **or** to map alternate audio source to encoder. NOTE: PUSH and ROTATE functionality is determined by Setting 2 on the MPA-MIX-NET Webpage. PUSH and HOLD to enable SOLO Monitoring of selected source. NOTE: PUSH and HOLD to enable SOLO Monitoring can be disabled using Setting 3 of the MPA-MIX-NET Webpage.
9	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE entire Stereo Monitoring Mix from the Headphone Output.
10	Select/Menu	Rotate to Scroll through Mix Banks A-P **or** to adjust Level of Stereo Monitoring Mix. NOTE: The behaviour of the Select/Menu encoder is determined by Settings 4 and 5 on the MPA-MIX-NET Webpage. PUSH to MUTE/UNMUTE Internal Loudspeakers and Balanced Analogue Audio Outputs. The Select Menu Encoder is also used to access the Settings Menu of the MPA-MIX-NET. Further information can be found in the Initial Setup chapter of this manual.

MPA1-MIX-8 Operation

The front panel of the **MPA1-MIX-8-V** is equipped with ten rotary controllers as follows:

| Encoder	Function	Notes
1-8	Audio Level	Rotate to adjust relative contribution of Sources 1-8 to Stereo Monitoring Mix. *NOTE: Sources available are determined by the currently selected Mix Bank (A-P) and the contributing audio channels for each Mix Bank as set in the Routing Tab of the MPA1-MIX-8.* PUSH to MUTE/UNMUTE contribution of Sources 1-8 to Stereo Mix. *NOTE: PUSH to MUTE/UNMUTE functionality can be disabled by Setting 1 of the MPA-MIX-8 Webpage.* PUSH and ROTATE to adjust Balance of selected source **or** to map alternate audio source to encoder. *NOTE: PUSH and ROTATE functionality is determined by Setting 2 on the MPA-MIX-8 Webpage.* PUSH and HOLD to enable SOLO Monitoring of selected source. *NOTE: PUSH and HOLD to enable SOLO Monitoring can be disabled using Setting 3 of the MPA-MIX-8 Webpage.*
9	Headphone Volume	Rotate to adjust Headphone level as required. PUSH to MUTE/UNMUTE entire Stereo Monitoring Mix from the Headphone Output.
10	Select/Menu	Rotate to Scroll through Mix Banks A-P **or** to adjust Level of Stereo Monitoring Mix. *NOTE: The behaviour of the Select/Menu encoder is determined by Settings 4 and 5 on the MPA-MIX-8 Webpage.* PUSH to MUTE/UNMUTE Internal Loudspeakers and Balanced Analogue Audio Outputs. The Select Menu Encoder is also used to access the Settings Menu of the MPA-MIX-8. Further information can be found in the Initial Setup chapter of this manual.

MPA1-SOLO-IP Front Panel Display

Display	Function	Notes
1	Headphone Level	Display showing level of Headphone Output
2	Speakers	Display showing level of Internal Loudspeaker and Balanced Line Level Output output.
3	Audio Meter Scale	Audio Meter Scale in dBFS
4	Audio Level Display	*See settings 7 and 8 for further information on setting* <u>*Warning and Alarm Thresholds*</u>.
5	Balance/Pan Display	The relative contribution to the Left and Right channels of the Stereo Monitoring Mix is identified by the position of the Balance/Pan
6	Status Indicators	Status indicators showing presence of valid input sources
7	Channel Name	*For further information on how to set these names, refer to the* <u>Channel Names</u> *section of this manual.*
8	Phase Meter	Audio Phase Meter for currently selected audio pair

MPA1-SOLO-SDI / MPA1-SOLO-SDI-1
Front Panel Display
Display	Function	Notes
1	Headphone Level	Display showing level of Headphone Output
2	Speakers	Display showing level of Internal Loudspeaker and Balanced Line Level Output output.
3	Audio Meter Scale	Audio Meter Scale in dBFS
4	Audio Level Display	*For further information on adjusting warning and alarm thresholds refer to settings 7 and 8 in the* webpage configuration *table.*
5	Balance/Pan Display	The relative contribution to the Left and Right channels of the Stereo Monitoring Mix is identified by the position of the Balance/Pan
6	Status Indicators	Status indicators showing presence of valid input sources
7	Channel Name	*For further information on how to set these names, refer to the* Channel Names *section of this manual.*
8	Phase Meter	Audio Phase Meter for currently selected audio pair

| Display	Function	Notes
1	Channel Label	Label displaying Channel friendly name. NOTE: Friendly names can be entered in the Channel Names section displayed within the Names Tab of the MPA1-MIX-SDI Webpage.
2	Audio Level Meters	Displays Audio Level of associated Source Channel
3	Gain Bar Display	Level of Channel contribution to Stereo Monitoring Mix. NOTE: Inclusion of the Gain Bar Display is determined by setting 6 in the Configuration Tab of the MPA-MIX-SDI Webpage.
4	Balance/Pan Display	The relative contribution to the Left and Right channels of the Stereo Monitoring Mix is identified by the position of the Balance/Pan
5	Headphone and Speakers Level Displays	Display of current Headphone and Loudspeaker Output Level settings (0 Min – 100 Max).
6	Mix Bank Name	Label displaying friendly name of currently selected Mix Bank. NOTE: Friendly names can be entered in the Group Names section displayed within the Names Tab of the MPA1-MIX-SDI Webpage.
